# COVID-19 Tests

PCR tests, the most common type of test for COVID-19 have been shown to be up to 37% inaccurate<sup>[1]</sup>. According to Anthony Fauci the PCR Test is “useless” when ran at a “cycle threshold” of 35 or more<sup>[2]</sup>. The FDA recommends the test be ran at up to 40 cycles<sup>[2]</sup>.

The inventor of the PCR test, who was awarded a Nobel Prize in Chemistry, has stated the test was never intended to be used for infectious diseases and that “with PCR if you do it well you can find almost anything in anybody”<sup>[3]</sup>. Case in point, Coca-Cola has tested positive for COVID-19<sup>[4]</sup>.

Antigen tests have also been shown to be wildly unreliable. For example, Elon Musk took four antigen tests in one day with two coming back positive and two coming back negative<sup>[5]</sup>.

The former chief science officer at PFizer has stated the “pandemic is over” and the “second wave” is based on false-positive COVID tests<sup>[6]</sup>.

# Overwhelmed Hospitals

This data is hard to find and vet.

There's a lot of low quality conflicting information out there. South Dakota Governor Kristi Noem has shed some light on this issue, though. CBS ran a COVID fear piece on South Dakota's Hospitals and the governor rebutted their hysteria with the facts. Less than 20% of their hospital patients have COVID-19 and 40% of their beds are empty as of Dec 1st 2020.

Ohio has similar numbers with 18.47% of beds going to COVID-19 patients and 27% empty:

So what is the ideal hospital occupancy rate? According to [hospitalmedicaldirector.com](https://hospitalmedicaldirector.com) around 75-85% which actually puts both South Dakota's and Ohio's Hospitals under capacity.

# Child Sacrifice

This graph shows COVID-19 deaths by age range:

School age children account for approximately 0% of COVID-19 deaths<sup>[1]</sup>. Yet throughout the course of their lives they will pay the biggest price for all of this.

The Journal Of The American Medical Association calculates that 5,530,000 life years may be lost as a result of school closures. Had schools remained open, 1,470,000 life years lost could have been expected as a result, based on results of studies associating school closure with decreased pandemic spread<sup>[2]</sup>.

If that trade were not abhorrent enough the switch to virtual learning disproportionately affects disadvantaged students who are less pressured to show up to class and whose families cannot afford the equipment required for remote learning<sup>[3][4][5]</sup>.

This says nothing about taking away one of their primary forms of social skill development of which the long-term effects could be devastating for our country.

# Masks

Where to begin with masks? Do they work? Is that even the right question to be asking? The debate about whether or not they work misses the more fundamental point of whether or not there is a need to resort to what is most likely pseudoscientific desperation. Given the death rates I'd say absolutely not. It horrifies me to imagine how people would behave in a real emergency if this is how people handle something with a 99.5+% survival rate. Then again it seems like people take their cues from the media and authority figures more than thinking things through for themselves. Will you surrender for just one more moment of a comfort even if that means sowing the seeds of subjugation for generations to come? Ah, who am I talking to. You can't hear me. Let's look at some graphs.

These graphs show when mask mandates were implemented and their effect on the spread of COVID-19<sup>[1]</sup>:

You have to assume people like Mike DeWine and Joe Biden have access to data like this. So why are they lying to our faces (I mean masks)? Do these masks look like they're stopping the spread of vaporizer smoke<sup>[2]</sup>?

In a CDC report 71% of COVID-19 patients reported “always” wearing a mask in the 14 days before illness onset<sup>[3][4]</sup>. If that is because masks protect others from you why is so much smoke escaping from the masks in the images above? Is it because the virus particles are smaller than the vape particles?

Of course there is that recent major (6000 people) Danish study which showed no statistical evidence that masks did anything to stop the spread of COVID-19<sup>[5][6]</sup>.

Then there was that time when Anthony Fauci told us that “asymptomatic transmission has never been the driver of outbreaks”<sup>[7]</sup>. Then there was the time Anthony Fauci told us “there’s no reason to be walking around with a mask”<sup>[8]</sup>.

In summary, everyone in the country should be forced to wear a mask because maybe they are in the asymptomatic phase of disease with a 99.5+% survival rate and even though masks have been shown to be statistically insignificant when it comes to stopping the spread of COVID-19 maybe they'll work anyway and that will save a lot of people from dying. Also the social and psychological effects of masks are 0.00 and even though right on the masks package it says it will not stop the spread of COVID-19 just do it anyways because if we all believe hard enough it will totally work. The entire spread of COVID-19 is the fault of those damn anti-maskers.

Wow, how dark it is when our light bearers betray us.

May I share one last point with you on this nightmare. It's not my idea. I got it from Computing Forever<sup>[9]</sup>. You would think if masks worked companies would sell masks based on their effectiveness at stopping COVID-19. For example, our masks are 50% more effective at preventing the spread of COVID-19 than the competitor. But you don't see that.

# Unemployment

Unemployment is almost double what it was this time last year. When people lose their jobs they lose their health insurance, they fall into substance abuse, they don't eat as well, they become depressed, and in general they start to break down.

There are currently 10.7 million unemployed people in the United States and about half of those are a result of our reaction to COVID-19.

There is no excuse for the psychotic one-dimensional obsession with COVID-19 exhibited by certain politicians. They have caused far more damage than they have prevented.

**Chart 1. Unemployment rate, seasonally adjusted,  
November 2018 – November 2020**

## What I Really Think

I am disillusioned. This is a very real threat to freedom we are facing and too many people have their heads buried in the sand.

Increased censorship combined with control over movement is one direction this could be heading that I am particularly concerned about. That is total subjugation and it must be fought.
